Retrospective

The retrospective is the driving force behind establishing a high-performing, self-organizing and cross-functional team of professionals.

At the heart of the retrospective is the concept of continuous improvement: taking ownership of the process and regularly making small improvements. This promotes whole-team accountability and guards against complacency.

Attendees

Developers

Scrum Master

Product Owner

Actions

INSPECT how the last sprint went with regards to people, relationships, process, and tools

IDENTIFY and order the major items that went well and potential improvements

OUTPUT actionable and committed improvements to process

Check List

- Attended by the whole team
